

“We find the Dutch genetics offer us a cow that suits our system which is a high production, high components and good fertility cow”

– John A. Grehan, Ireland

JOHN A. GREHAN IRELAND

“I’m John A. Grehan from Ireland and I farm in partnership with my father. We milk 110 cows and rear all our own heifers on 32 hectares. We imported our herd from the Netherlands in 2003 and have been using Dutch genetics throughout the herd since then. The cows are averaging 680 kg of milk solids per year on an interval of 386 days. We find the Dutch genetics offer us a cow that suits our system which

is a high production, high components and good fertility cow. We are really impressed with these calves. From day one, they were lively calves and we had no problems with them.

At the moment we are using Delta Lunar, Delta Moutard, Bentehoek Faithful Red, Leenhorster E-Profit, Delta Magister and Delta Rosebud based on the advice that I received from CRV.”
